

Lecture Homework Week 07 - Thursday

Student Information

Name: Hannah Hwang

NetID: hhwan038

Student Responses

Answer the following questions.

Question 1

Comment out the asm line. Run the program again to see what would happen. What do you observe that happens differently than before:

- The “five seconds event” line does not appear
- The interrupt increment number is not accurate to the second timer. It’s absurdly large, and updates rapidly.

Question 2

In terms of CPU power consumption, what difference does the asm statement make?

The asm statement basically allows the system to be in low power mode by telling the coprocessor to place the CPU into “Wait for Interrupt” rather than constantly being active.
